

Chemical

PTFE/Teflon Tubing

- High-precision, thin and thick-walled tubing
- Ideal for transfer of corrosive chemicals
- High burst pressures
- Resistant to high temperatures

ePTFE Cut Gaskets

- Efficient sealing tape for flange connections and container rims
- Resistant to corrosive chemicals and high temperatures
- Superior compressibility and recovery allows improved sealing of gaps

ePTFE Joint Sealant

- Efficient sealing tape for flange connections and container rims
- Resistant to corrosive chemicals and high temperatures
- Superior compressibility and recovery

ePTFE Membranes

- Allows passage of gases but not liquids
- Ideal for micro-filtration in chemically corrosive environments
- Variety of pore sizes offered

Seals, Valves and Seats

- Precision machined components with industry leading levels of tolerance
- Superior properties allow for use in highly corrosive applications
- Specialised grade selection to suit any end-use
