

Aerospace

PTFE/Teflon Tubing

- High-precision, thin-walled tubing for vents, valves and fluid transfer systems
- High-pressure hoses for pneumatic and hydraulic lines
- Resistant to high-temperatures and chemically inert

ePTFE Joint Sealant

- Reliable mechanical performance in challenging environments
- Meets AMS 3255A standards
- Superior compressibility and recovery allows improved sealing of gaps
- Operates across a variety of pressure and temperature conditions

Specialised Polymer Components

- Precision machined components with industry leading levels of tolerance
- Low-weight polymers to improve efficiency and performance
- Superior-wear properties to allow for high RPM applications
- gases
